Silverfort

Silverfort risk and incident notifications for Slack

Available for: *on-prem and cloud*

Enhance your security posture with real-time risk and incident notifications in Slack

Maintaining end-to-end visibility across an entire organization's environment is a constant challenge for security teams. With Silverfort's integration with Slack, your security teams can get real-time alerts about security events happening in your environment based on our risk and incident analysis.

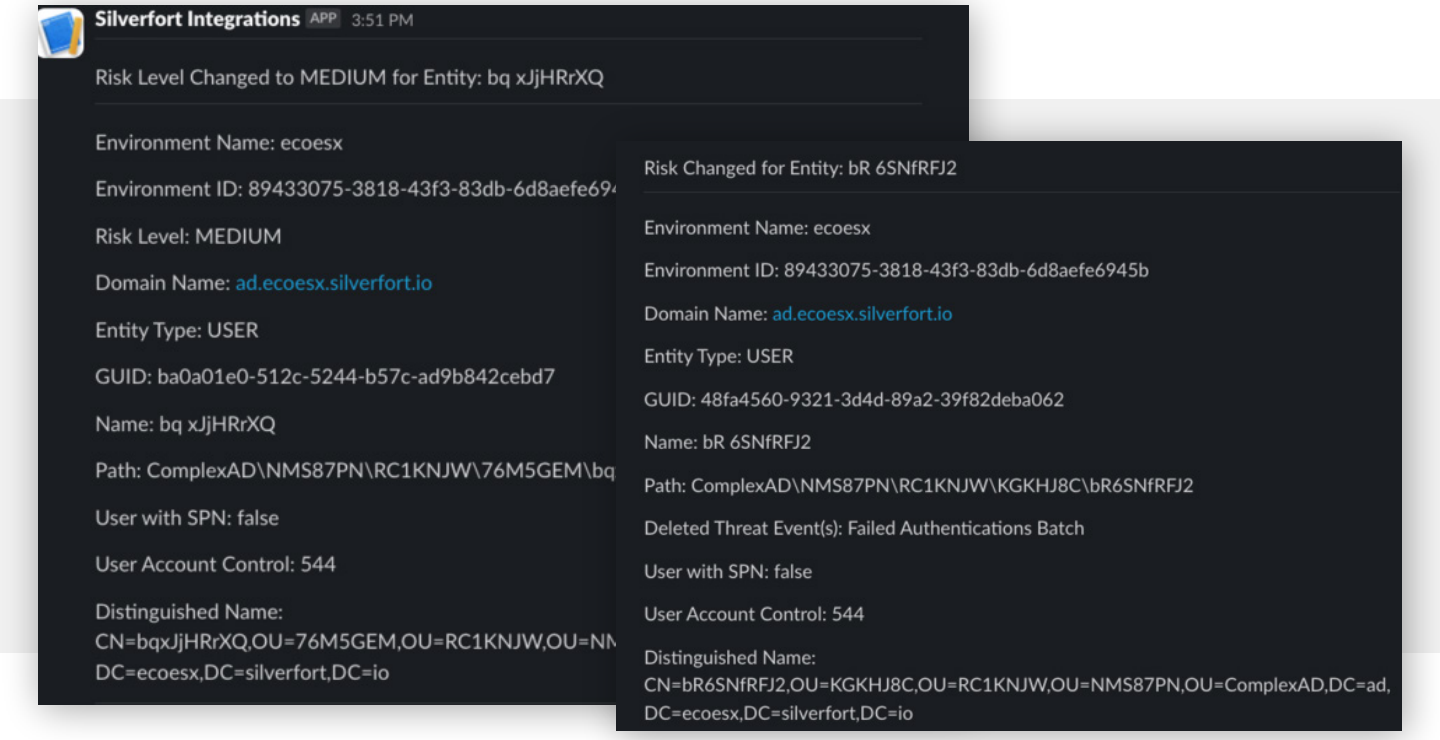
Enabling risk and incident notifications with Slack

By integrating Silverfort with Slack, organizations can enhance their security monitoring capabilities, enabling faster response and improved security operations. This integration allows security teams to receive real-time alerts on security events across their on-prem and cloud environments, including new incidents, entity risk level changes, new cloud threats, new and changed cloud exposures, and identity risk changes. Silverfort for Slack offers end-to-end visibility into all security risks and incidents, simplifying the prioritization of high-risk events and accelerating mitigation efforts.

How Silverfort's risk and incident notifications integration with Slack works

To set up this integration, you will need to configure Slack to accept incoming webhooks and adjust your Silverfort settings to send notifications based on pre-defined risk levels. When this configuration is complete, Silverfort will push notifications to Slack whenever critical events occur. These notifications include detailed information about the event, so security teams can quickly assess and respond to critical threats.

How Silverfort's risk and incident notifications integration with Slack works



Examples of real-time alerts that are sent to Slack in response to various events or triggers.
These notifications are tailored to the specific circumstances of each event.

Key benefits

Real-time alerts

Receive immediate notifications about critical risks, threats, and incidents directly in Slack.

Streamlined response

Reduce the time to mitigate threats and exposures, and strengthen your security operations.

Enhanced visibility

Gain better visibility into security risks and exposures across your on-prem and cloud environments, allowing for more informed decision-making and prioritization of high-risk events.

About Silverfort

Silverfort secures every dimension of identity—human, machine, and AI—across on-prem, cloud, and hybrid environments. We are the first to deliver an end-to-end Identity Security platform that is easy to deploy and won't disrupt business operations, resulting in better security outcomes with less work. Discover every identity across every environment, analyze exposures to reduce your attack surface, and enforce security controls inline and at runtime to stop lateral movement, ransomware, and other identity threats.
